

Grade 5 T2 Final Review

The internet is a global network of interconnected computers that allows individuals to communicate and share information digitally.

Electronic communication refers to the exchange of information using electronic devices like computers, smartphones, or other digital platforms. Handwritten letters are a form of traditional, non-electronic communication.

The term "WWW" stands for the World Wide Web, which is a system of interlinked hypertext documents accessed via the internet.

Video chat platforms like Skype or Zoom enable real-time, face-to-face communication via video across long distances.

An email address typically consists of a unique username followed by the '@' symbol and a domain name (e.g., example@gmail.com).

Texting, commonly accomplished through messaging apps or SMS, enables the transmission of short written messages in real-time.

The subject line in an email serves as a brief summary or headline, indicating the main topic or purpose of the email.

WhatsApp is a widely used instant messaging application that enables individuals to send text messages, make voice/video calls, and share media files.

Search engines, such as Google or Bing, help users find specific information by searching through vast databases of web pages and delivering relevant results.

A word processor application like Microsoft Word or Google Docs facilitates collaborative work on documents, allowing multiple users to edit and share files simultaneously.

IP stands for Internet Protocol, which is a set of rules governing the format and transmission of data packets over the internet infrastructure.

Video chat can be conducted on various devices, including computers, smartphones, tablets, and smart TVs, depending on the platform or application being used.

Online chat typically enables instantaneous, real-time conversation between individuals, while email communication may involve delays in response time.

Facebook is a widely used social media platform that allows individuals to create profiles, connect with others, share content, and communicate through various features.

CC, which stands for Carbon Copy, is used in email composition to send a copy of the message to additional recipients who are not the main recipients.

Online forums provide platforms for users to engage in discussions, share information, ask questions, and collaborate on specific topics of interest.

Cloud storage services like Google Drive or Dropbox enable users to store, share, and edit digital files simultaneously, facilitating seamless collaboration.

Passwords are used to protect and secure online accounts, ensuring that only authorized individuals can access personal information or perform actions within the account.

Microsoft Word is a word processing application, whereas web browsers like Google Chrome, Internet Explorer, and Safari are software used to access and view web pages.

Internet search engines utilize complex algorithms to comb through an extensive database of web pages, indexing and presenting relevant results based on user queries.
