

# T4 Final Review G1

## **Draw the following picture in the Paint Program:**

1. Open Your Paint: Ask a grown-up to help you open MS Paint on the computer.
2. Pick a Shape: Look for the 'Shapes' button at the top. It looks like a little square and circle together. Click on it and choose the 'Rectangle' for the house.
3. Draw Your House: Click on the white paper in MS Paint and drag to make a big box. This is your house's body.
4. Make the Roof: Now, we need a roof. Click on 'Shapes' again and find the 'Triangle'. Click and drag above your box to make a pointy roof.
5. Add a Door and Windows:
  - For the door, make a smaller box at the bottom of your house.
  - For windows, make little boxes on the house. You can make them empty or color them in.
6. Color Your House: There's a tool that looks like a little bucket of paint. Click on it, choose a color you like, and click inside your house and roof to color them.
7. Add Fun Details: You can draw a doorknob, curtains, or even a chimney with the 'Pencil' tool. It's like drawing with a real pencil!
8. Save Your Picture: When you're done, ask a grown-up to help you save your picture. Go to 'File', click 'Save as', and pick a place to keep your house safe.

Remember, if you make a mistake, there's a magic 'Undo' button that can fix it! And you can make things bigger with 'Zoom' to add small things like flowers or a mailbox.
