

Grade 6 T2 Mid-Term Review

What is a website

A web page is a document with text, images, sound and video that can be accessed on the web from any device that is connected to the Internet. You have to use a web browser to be able to read a web page.

A website is a set of web pages joined together. All the websites are kept on computers on the Internet, which are called Web Servers.

The first page of a website is called the homepage. From there you can go anywhere you want using links to the other web pages. These links are called hyperlinks. You can use a hyperlink to go to another web page in the website or to another website. You can also use a hyperlink to pop up more information on a subject or to show an image in details

To build a website, you need to know HTML (Hyper Text Markup Language), a language that describes everything that you want to display on each web page. Fortunately, there are tools that can help you build a website without any knowledge of HTML. Zoho Sites (www.zohosites.com) is one such online web design tool. Try it to build your own website!

You can create a website which will contain any information you want and your friends can access it any time. It's very easy and fun. Let's start!

Design a web page

To create a website:

- First, go to <http://www.zoho.com/sites/> and click Start an account.
- Free Trial Now 2 to create
- Type your email address and a password to sign up.
- Type a name for your new site.
- Click Template Gallery to continue and choose the template you want.
- That's it! Your template is ready to add info.

Elements help to build and improve the structure and the look of your website by adding content type things such as texts, images, buttons, dividers, audio, and video.

The World Wide Web (WWW) was created in 1990 by CERN physicist Tim Berners-Lee. On April 30th 1993, CERN announced that the World Wide Web would be free to use for anyone.

To create a website:

- First, go to <http://www.zoho.com/sites/> and click Start Free Trial Now to create an account.
- Type your email address and a password to sign up.
- Type a name for your new site.
- Click Template Gallery to continue and choose the template you want.
- That's it! Your template is ready to add info.

Your website is ready! You can add your text and photos. You already know how to type text and format it in a word processor. You can do the same here. Use the toolbar at the top to help you personalize your site.

Let's add some text:

- When you click the heading, you can type your text.
- As soon as you do that, a bar with tools for text editing appears. Use it, to modify your text.
- Don't forget to click Save 3 to save your work.

To upload a photo:

- Click in the slide area. A Hero slide window will appear.
- Click Change image.
- On the Change Image window, click Upload to find the photo from your computer.
- Choose the photo and click Open to upload your image.
- Check your image and click Save. The new image appears on your sitepage.

When you click a text or a photo, the available editing tools are different.

To delete text:

- Select the text you want to delete and click the Delete icon on the top of the text box. On the Confirmation window, click Delete.

To hide the banner:

- On the top-left corner of the builder, click Pages. The Pages window will appear.
- On the Pages window check home page and click Edit Page info.
- On the Edit Page window that appears, go to the right part of the tray and below Show hero banner on this Page select No.

- That's it! The banner will disappear from the Home Page.

Another cool option is that you can insert headings, pictures, videos, etc., from your computer.

Don't forget to save your work every time you make a big change

If you have many things to include in your site and want the information more organized, you can insert more pages. Let's add a new page with your photos.

To add a new web page:

- On the top-left corner of the builder, click Pages.
- The Pages window opens.
- Click Add Page.
- On the Add Page window that appears, type a page name, for example Pictures.
- Click Add.

When you design a website, try to keep it simple. Don't put too many pages or too much information in it, because visitors will be lost trying to find out what you want to present.

Elements help to build and improve the structure and the look of your website by adding content type things such as texts, images, buttons, dividers, audio, and video..

To add elements to your page:

- On the top-left corner of the builder, click the Add [+] icon.
- Click Element.
- On the new window that appears, click Element.
- Drag and drop the element from the tray to the position you want inside your page.

Remember that you can reposition the element in your page using the four-point arrow.

Let's add the final touch! Add a table to present a set of information about something specific. For example, you can add a table with information to show the overall standings of your team for the last three years

To add a table:

- On the top-left corner of the builder, click Add [+] icon and then Element.
- Click Element.
- At the right part of the tray, click Table.
- A Table Properties window will appear. Enter the number of rows and the columns you want.

- Click OK
- On the Table window, set Align, Width and Table header position.
- Now your table is ready to insert
- the info.

To publish your website:

- Click Publish.
- On the Choose a domain for your website window, type a name for your site.
- Click Proceed to Publish.
- That's it. Your site is now published.
